

Bently Nevada's People's Republic of China Office Expands Its Scope

Bently Nevada's People's Republic of China (BNPRC) Office was established in March 1986 in Beijing. It started with only four people, and was one of the pioneer American companies after China's "open door" reform in the 1980s.

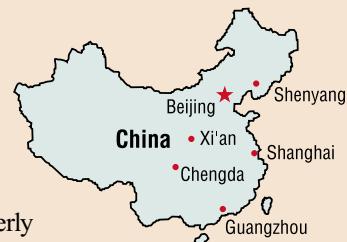

During the past decade, BNPRC has greatly expanded its business scope with the addition of five satellite offices: Shenyang (covers the northeast region), Xi'an (covers the central and northwest regions), Chengdu (covers the southwest region), Guangzhou (covers the south and Hong Kong), and the head office in Beijing. An office in Shanghai will soon be established to cover the eastern area. These offices bring Bently Nevada closer to our customers in power generation, petrochemical production, machinery manufacturing, and other industries. With project management and engineering services capabilities, there are now a total of 28 people working in these offices.

The Beijing office has a functional training facility where various technical training courses are conducted.

On-site seminars are also held in customer locations, through our satellite offices. A quarterly Chinese Newsletter is published by BNPRC and features customer case histories in using BNC products and services to improve their plants' performance.

Numerous senior management and engineering personnel from our Chinese customers have visited Bently Nevada's headquarters in Minden, Nevada. BNC senior managers visit our customers and hold seminars every year in China. Invited by the Ministry of Electric Power, Mr. Bently visited China in the fall of 1992 when he conducted a Rotor Dynamics Seminar at Tsinghua University and was recognized as a "Visiting Scholar of Tsinghua University."

As a growing member of the BNC family, BNPRC continues to expand its reach in helping our Chinese Customers Protect and Manage All Their Machinery. ☺

A recent seminar held in BNPRC's training center.
